[More About Us](#)

NAMM 2007 was a great success for Kasha Amplifiers. We introduced three innovative products to the music scene. The worlds first motorized speaker control system, Robo-CAB. The new universal Quikmod that can turn most tube amps into two channels with the classic Rockmod sound, and the Rockmod Brick, a two channel preamp with dual EL84 or 6V6 output stages.

We invite you to read our news letter and share in the exciting innovations from Kasha Amplifiers.

Thank you,  
John Kasha

### QUICKMOD

Have you bought an amp from a music store that was exactly like your favorite guitarist, got it home and was disappointed in the sound? Well, don't feel bad, many have experienced this phenomenon. The real story is your favorite player had some amp guru make it sound that way. Kasha Amplifiers Quikmod is a professional amp modification system that can turn most tube amps into a plethora of tone, gain and sustain. Simply unplug the amps first preamp tube and insert the QuikCable in place of the tube and viola, instant mod! The Quikmod can switch from the classic Rockmod sound and back to the original in one click. There are two controls Gain and Post Gain for shaping your tone, channel switch and a remote jack .

Click picture for more information on Quikmod. MSRP \$499

### Robo-CAB

Ok, picture this. You're at the gig excited to blow the house down with your awesome technical guitar abilities. You turn the amp on and start melting the walls down with a big blast of tone, and then you hear the words "can you turn down". You're shocked, you've been tone sequestered. The Robo-CAB is a speaker control system that will isolate your sound to the guitarist. You can position the speaker at any angle so that you can hear every note played on your guitar. The sound man will also be happy since he can have a better mix without guitar bleed all over the stage. The RoBo-CAB can also simulate multiple cabinet sounds. You can go from a classic closed back to an open back in seconds. With the optional Autopilot foot controller, you can make your cabinet into a natural phase or flanger. The motor is rugged and can lift over 150lbs and runs off a 9V battery inside the cabinet. MSRP \$1195

There are many uses for RoBo-CAB. Click on picture for more information

### ROCKMOD Brick

The gig is not what it used to be, bringing stacks of cabinets and heads are long gone. Most players today want lite weight gear that can produce a power house of tone in a small package. The Rockmod Brick was invented to solve this issue. It has all the features of the classic Rockmod I preamp with a builtin 6W to 12W power amp. The features include two channels, lead, clean with shared EQ, tube buffered serial effects loop and foot switch. 4 12AX7 and

either 1 EL84, 2 EL84 or 1 6V6, 2 6V6 power tubes. MSRP \$899

All preamp tubes light up red. To learn more, please click on picture.

Check out NAMM highlights pictures with Tim Pierce, Dean Parks and Kevin Dukes. With special appearances from Uli Roth and Phil X at: [www.kashaamplifiers.com](http://www.kashaamplifiers.com).

Special thanks to friends and manufacturers that helped make the show a great success.

Andy Z, Bobby Ferrara, Kevin Dukes, Bruce Davis, Teye of Electric Gypsy Guitars, Grem Guitars, Sound Innovations and the entire Kasha team.
